DETAILED ACTION

1. The amendment received on 10/29/2007 has been considered. It has been noted that claims 1-11 and 15-17 have been amended. New claims 18 and 19 have been added.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fogelman et al (US 4,440,457) in view of Hedrick et al (US 6,135,884).

Re claims 1,5: Fogelman et al discloses a method and group of components for converting a gaming machine from a first game to a second game, the method comprising: removing a plurality of first display elements of a top box associated with the first game, the first display elements supported on a standardized substructure of the top box (see col.3, lines 50-52); and installing / replacing a plurality second display elements on the substructure in place of the one or more first display elements, the one or more second display elements being associated with the second game (see figs.1 and 6; col.2, line 64-col.3. line 10); wherein the substructure is substantially concealed from a player's view during normal operation of the gaming machine, the first display elements and the second display elements comprising external decorative shell elements of the top box (see fig.6; col.3, line 46).

10/658,921 Art Unit: 3714

However, Fogelman et al does not explicitly teach at least a portion of the second display elements having a different shape than the first display elements; the first display elements and the second display elements substantially enclosing the front and sides of the top box.

Hedrick et al teaches at least a portion of the second display elements having a different shape than the first display elements (see abstract; col.7, line 66-col.8, line 10); the first display elements and the second display elements substantially enclosing the front and sides/various locations of the top box (see col.3, lines 45-58).

Therefor it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teachings of Hedrick et al into the teaching of Fogelman et al. One would be motivated to do this so as to have a system where change in display could involve change on any location on the gaming machine, and also in any shape or form with the first display different from the second display. It is apparent and analogous for the substructure / frame to be concealed from the player of the game because it internal, hidden, and inside the gaming machine. It is apparent to Examiner that although Fogelman et al did not explicitly mention second display, it is analogous that if a display is removed and/or replaced as disclosed in col.3, line 50-52, it means a second display is put in place of a first display.

Re claims 2,3,9, and 15: Fogelman et al discloses the method wherein the first display elements / monitor are mounted to the substructure / frames (see fig.6; col.3, line 46), wherein the removing step disconnects the first display elements from the substructure (see col.3, lines 50-52), and wherein the installing step mounts the second display elements to the substructure; wherein the first display elements and the second display elements are further selected from a

Application/Control Number:

10/658,921

Art Unit: 3714

group consisting of sculptures, video displays, and mechanical displays (see col.3, lines 1-5). It is apparent to Examiner that although Fogelman et al do not explicitly disclose removing and installing, it is analogous to remove a first display and then install a second display in the process of replacing of display.

Re claims 4,10, and 16: Fogelman et al discloses the method wherein the first display elements include a first side facing artwork / graphics panel adapted to be backlit from within the top box, and wherein the second display elements include a second side facing artwork / graphics panel adapted to be backlit from within the top box (see col.3, lines 54-60).

Re claims 11 and 17: Fogelman et al discloses a gaming machine convertible from play of a first game to play of a second game, the machine comprising a top box display having a standardized internal substructure / frame (see fig.6; col.3, line 46), the substructure being substantially concealed from a player's view during normal operation of the gaming machine, the substructure supporting one or more first display elements associated with the first game when the machine is operable to play the first game, the substructure supporting one or more second display elements associated with the second game when the machine is operable to play the second game, the one or more second display elements adapted to mount to the substructure in place of the one or more first display elements after the one or more first display elements are removed from the substructure (see figs.1 and 6; col.2, line 64-col.3. line 10 and col.3, lines 50-52).

However, Fogelman et al does not explicitly teach at least a portion of the second display elements having a different shape than the first display elements; the first display elements and the second display elements substantially enclosing the front and sides of the top box.

Hedrick et al teaches at least a portion of the second display elements having a different shape than the first display elements (see abstract; col.7, line 66-col.8, line 10); the first display elements and the second display elements substantially enclosing the front and sides/various locations of the top box (see col.3, lines 45-58).

Therefor it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teachings of Hedrick et al into the teaching of Fogelman et al. One would be motivated to do this so as to have a system where change in display could involve change on any location on the gaming machine, and also in any shape or form with the first display different from the second display. It is apparent and analogous for the substructure / frame to be concealed from the player of the game because it internal, hidden, and inside the gaming machine. It is apparent to Examiner that although Fogelman et al did not explicitly mention second display, it is analogous that if a display is removed and/or replaced as disclosed in col.3, line 50-52, it means a second display is put in place of a first display.

Re claims 18 and 19: Fogelman teaches wherein at least a portion of the standardized substructure is situated toward the back of the top box (18,24) (see fig.6).

4. Claims 6-8 and 12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fogelman et al (US 4,440,457) in view of Hedrick et al (US 6,135,884) and further in view of

Application/Control Number:

10/658,921

Art Unit: 3714

Seelig et al (US 2004/0051249). The teachings of Fogelman et al and Hedrick et al have been discussed above.

Re claims 6-8 and 12-14: Fogelman et al teaches a gaming machine for converting from play of a first game to play of a second game.

However, Fogelman et al fails to explicitly teach wherein the substructure includes a cable chase defining a space for accommodating power and data cables; wherein the cable chase is adapted to support power supplies and controller boards; wherein the cable chase includes a plurality of connector holes for mounting standardized cable connectors.

Seelig et al teaches wherein the substructure includes a cable / wire chase defining a space for accommodating power and data cables; wherein the cable chase is adapted to support power supplies and controller boards; wherein the cable chase includes a plurality of connector holes for mounting standardized cable connectors (see figs.1, 4, and 5; par. [0017] and par. [0045]).

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to make this combination of Fogelman et al and Seelig et al so as to have a compartment and section of the gaming machine for storing cables, wires and components related with the electrical connection in the gaming machine hence hiding the electrical connection from the player and protecting the player from getting in electrical danger by being exposed to the wires, protecting the player from hurting themselves by tripping over the wire, and making the game more compact, neat, and more inviting to the player. It is also obvious that for the cable / wire chase to be mounted on the gaming machine, there has to be holes necessary for mounting.

Response to Arguments

5. The Applicants correction in regards to the Drawings, Specifications, and Claim

rejections are accepted therefore, the objections and rejection have been withdrawn.

6. Applicant's arguments filed 10/29/2007 have been fully considered but are moot in view

of the new ground(s) of rejection.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this

Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a).

Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a). Applicant

is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
